

PATENT APPLICATION

042390.P5112

CLEAN VERSION OF AMENDMENTS PER 37 CFR § 1.121**Amendment to Specification**

Please add the following to the beginning of the specification:

This is a continuation of application 09/002,747 filed on January 5, 1998.

Amendment to Claims

1. A method comprising:
storing a table of orthogonal pseudo-noise codes;
partitioning the table of orthogonal pseudo-noise codes into at least two codebooks each having at least two pseudo-noise codes;
assigning a first codebook to a first user;
spreading a first information signal for the first user with a first pseudo-noise code contained within the first codebook.

11. A method comprising:
storing a table of orthogonal pseudo-noise codes;
partitioning the table of orthogonal pseudo-noise codes into at least one codebook having a plurality of pseudo-noise codes;
assigning a first codebook to a first user, wherein the first pseudo-noise code of the first codebook corresponds to the value of the first information signal for the first user;
spreading a first information signal for the first user with a first pseudo-noise code contained within the first codebook.

12. The method of claim 11, wherein the location of the first pseudo-noise code within the first codebook corresponds to the value of the first information signal for the first user

13. The method of claim 11 further comprising:
